SAVE WATER, ENERGY AND MONEY

with the UK's leading washroom services provider

PHS WASHROOMS HAS LAUNCHED A DEDICATED WEBSITE TO SHOWCASE A RANGE OF AWARD WINNING PRODUCTS THAT WILL SAVE WATER, ENERGY AND MONEY AND HELP TO MEET ENVIRONMENTAL AND SUSTAINABILITY TARGETS.

The current global financial situation has forced organisations to review spend and maximise budgets. The PHS Water and Energy Saver Range not only provides an opportunity to reduce expenditure on water and energy but also helps meet environmental targets for awards such as ISO 14001.

The PHS Washrooms Water and Energy Saver Range website has cost calculators that illustrate how much water, energy and money can be saved by installing PHS products. This easy-to-use website has proved very useful to customers and has been instrumental in proving that the products are a viable investment due to the large savings that can be made, both financially and environmentally.

There are five products within the range, all addressing different areas of the washroom. PHS' water saving products reduce expenditure on both water and sewerage charges as well as improving environmental ratings.

The award winning Flush-wiser WC Flush Control is a water saving device that is attached to the siphon in the cistern of a WC, where it reduces the amount of water used to flush by up to three litres per flush. Flush-wiser can be adjusted to suit each cistern, taking into account the cistern's size and performance in order to achieve optimum savings, without compromising on hygiene. Flush-wiser was the 2008 winner of the BIFM Award for New Product (Innovation), is a Waterwise 'Marque' winner, a Water Technology List product and is WRAS approved.

Water wastage through urinal flushing is addressed by Flush-wiser Urinal Flush Control, an intelligent water management system that is exclusive to PHS and can save over 90% of water when compared to uncontrolled cisterns, and an extra 30% against basic water management systems. Using infra-red technology, the unit matches flush rate to usage that maintains hygiene standards, while conserving water and dramatically cutting costs on water bills. As a winner of the Waterwise 'Marque',

Airforce - the high speed, low energy hand dryer from PHS Washrooms

Flush-wiser Urinal Flush Control offers real benefits and savings. It is also a Water Technology List product and is WRAS approved.

In conjunction with Flush-wiser Urinal Flush Control, Eco-shield urinal sleeve enables a reduction in urinal water usage without increasing maintenance costs and eliminates the use of harmful cleaning products. The very latest in urinal sleeve technology, with its unique odour trap 'shield' and Nurazyme bio-block, Eco-shield protects against urinal smells and blockages by stopping the build up of uric salt and limescale using natural enzymes and 'friendly' bacteria.

The range also includes Airforce, a high speed, low energy hand dryer. Airforce's fast dry time coupled with an output of just

1.1kW/h ensures that hands are dried quickly and without excessive energy use. In fact, Airforce can cut energy consumption by up to 80% against other dryers of its kind. Importantly, Airforce also incorporates SteriTouch antibacterial surface protection, which helps reduce cross-infection by drastically reducing the spread of bacteria.

Aquila Truck Centres, based in the Midlands, has installed Airforce units across its sites, and Mak Khan, IT and facilities manager for Aquila, explained: "As a company that is moving towards ISO 14001, we are delighted with the Airforce hand dryers as they save us energy, time and money but dry hands more comfortably than our previous dryers; this means that we win in every way."

Adapta Tap, a push tap option that can save 80% of water used for hand washing, completes the range. Push taps prevent the risk of taps being left running, which also reduces the risk of flooding.

Ian Osborne, managing director of PHS Washrooms, explained: "As the UK's leading washroom services provider, PHS Washrooms is constantly striving to help customers keep their washroom water and energy costs down, without detriment to hygiene and this range is proving invaluable."

Any organisation that wishes to maximise cost savings and enhance environmental credentials will benefit from the PHS Water and Energy Saver Range.
